Dear member of public

The National Nuclear Regulator (NNR) is a public entity which serves to protect workers and members of the public from the harmful effects of ionising radiation. We recently conducted an environmental survey of the upper Wonderfonteinspruit Catchment Area and the results show elevated levels of radiation in the Tudor Shaft Informal Settlement area.

Although there is no eminent danger to members of the public, the NNR will continue to monitor public safety in your area and as a **safety precaution** we have prepared the following information for you and your family.

Please read this information and keep this leaflet in a visible place for all to see. Do remember to tell everyone in your area about this - Thank you!

Regards,

Adv. BM Mkhize

CEO: National Nuclear Regulator
